

How Dinosaurs Learned To Fly

This is Dip. Dip was a very big dinosaur but he had a very small brain. His brain was just big enough to hold one thought. Have fun.

Dinosaurs loved to have fun. They ate nothing but junk food. They never brushed their teeth. They had wild parties and stayed up all night long.

The early mammals tried to warn them. You'll go extinct if you keep that up! Extinct! Hahahaha!

Dinosaurs didn't care about danger especially not Dip. His favorite sport was jumping off cliffs. It was a lot of fun. The only part he didn't like was ...

Dip looked like he was having so much fun that other dinosaurs tried jumping from cliffs. It became a craze. Soon all the dinosaurs were jumping off cliffs. The early mammals couldn't believe their eyes. "Now it's raining dinosaurs!" Of course, there were accidents. "Uh oh! Oh you're so heavy."

After a while only a few of them were left. Hey, where is everybody?

We told you that jumping off cliffs was a bad idea. You should have listened to us. You should have eaten your greens. You should have brushed your teeth. You should have been more serious.

What if they're right, maybe it isn't good just to have fun. They began to worry.

Dip didn't worry. He was getting to be good at jumping off cliffs. But he still didn't like landing. Crazy dinosaur, don't you know better.

He tried to avoid hitting the ground through jumping different ways.

Dip flapped his arms again. After he he did, the longer he could stay in the air. He even grew a few feathers.

One day a new thought popped into Dip's head. Maybe I could use these new feathery arms of mine to fly? So Dip climbed to the top of the highest cliff in the neighborhood and then ... he jumped.

"Oh no!" "I can't watch."

Wow! You can fly. Let's follow him. Maybe we can fly too. The other dinosaurs tried and it worked. So the dinosaurs never did become extinct. Instead they evolved into birds and kept on having fun.
