Characters from The LEGO® Movie

Below you will find a summary of some of the characters from **The LEGO® Movie**. Choose some of the characters to discuss. Which character do you like the best and why?

Emmet, an ordinary, rules-following, perfectly average LEGO® minifigure who is mistakenly identified as the most extraordinary person and the key to saving the world. He is drafted into a fellowship of strangers on an epic quest to stop an evil tyrant, a journey for which Emmet is hopelessly and hilariously underprepared.

Wyldstyle is a tough-as-nails free spirit who mistakes Emmet for the savior of the world and guides him on his quest. She loves pushing boundaries and being creative. She has a strong, independent streak that makes her question when things are wrong.

Vitruvius is an ancient and heroic wizard who prophesizes that a “Special” will defeat Lord Business and become the greatest LEGO® Master Builder of all. He tries to teach Emmet that the key to true building is to believe in yourself and follow your own set of instructions inside your head.

President Business has a hard time balancing world domination with micro-managing his own life. He operates a successful business front that creates music, TV shows, surveillance systems, history books and voting machines, in addition to all dairy products and coffee. Secretly, he is Lord Business, the most evil of tyrants who oversees a robot militia and attempts to take over the LEGO® universe.

Batman is a mysterious LEGO® minifigure who prefers to work alone, since he could probably get the job done better and faster than anyone else.

Benny is a '70s era spaceman who suffers from a cracked helmet and lack of oxygen. His first love will always be spaceships but he will do anything to help his fellow LEGO® Master Builders.

Princess Unikitty hails from Cloud Cuckoo Land, the capital of rainbows and puppies. Unikitty is half unicorn, half kitten. She is happy to join her fellow LEGO® Master Builders in the quest to defeat Lord Business, but she also has a powerful secret.

Metalbeard is a fierce LEGO® Master Builder with the head of a pirate and the body of a multi-purpose utility knife. He is determined to finally defeat Lord Business after failing badly the first time they tangled.

Good Cop/Bad Cop is Lord Business' henchman, whose loyalty is tested when he is forced to turn on his own parents. As the story unfolds, it is apparent that there is a Good Cop inside him as well.

THE LEGO STORY

You've probably seen of this, a lego brick. But have you ever wonder how it started? And why it called lego? Actually the names's older than this plastic brick. Are you curious? Let me tell you how it all begin. Many years ago, there was a skilled are hard worker carpenture named Ole Kirk Christiansen. Ole was a respected carpenter of this own company. The time was hard so he didn't has much money and had to dismissed his last worker.

Ole : Came on in.

Worker : I've closed the down workshop and packed my things.

Ole : Thank you, I suppose better to gave you a paycheck, take care.

Ole: : Well that was the last one. I just didn't imagine how it comes to this.

Wife : I know, it's hard to understand, but atleast now. It can't be much worse.

But it did get worse, shortly after Ole lost his wife. But Ole was a special person. He was that type to give up and with responsibility of his four sons, he had to think of something. Only had gotten an Idea and for him, it nerver took long to put an idea into action. Ole's little inversion made his boys so happy . That he thought , he may be he should start to akira toys.

Ole decided to give a try , luckily he received a lot of woods from carpentary production. He can now use it to make toys. Timed passed by, and even thought Ole was a skilled carpenter and had good eyes for quality and detail, sale were very slow. Luckily one of his son , Garfred started helping out his dad after school together they just barely managed to keep up the production. Eventually world began spread wooden toys with finest quality would be made in a little workshop in bellow. One day a man droped in to town, a man who changed Ole's future. He was a whole seller from federisa.

Man : I'am afraid you are making very nice wooden toys.

Ole : Well, one does his best

The whole seller was very impressed with all wodden toys and place a big order before he left.

Ole : Now, There is finally someone who can see your opportunity in what you're doing. Look at this, he whole seller wants to put a lot of our toys in to his stores for holidays. He claned to be a good chirsmass this year and would be busy.

Now Ole got a lot to do in a little workshop and Ole could rehire his former worker, Ole only used the highest quality wood which was hard to pick and very carefully prepared, they worked day and night to get the order finished, so the whole seller could get out in store before Christmas.

Son : Is there something wrong dad ?

Ole : I'm afraid that we're in big trouble.

In the middle of their work, Ole received a letter saying the whole seller failed from bankruptcy and could not buy the toys that he ordered.

Son : But, what you're gonna do ? what about Christmas? Now we can't afford food ?

Ole : I'll do it.

Son: What you can do, dad.

Ole : I'll do it myself. I'll drive around selling the toys.

There was no time to lose, Ole packed the car with all the toys and drove off. Ole was a very good toy maker but was not a very good salesman. He did like crazy himself talking about how carefully the toys have been made. But he had to keep trying if he was going to sell anything.

Ole: This is going to be a blessing, is there anything you're interested in ?

Man : It looks exciting but I don't have a lot of money right now. Maybe week end try call different.

Ole: Well, I would prefer money, but.....

In the end he succeeded in selling all the toys. He didn't receive much money as he hoped but his family managed and he had plenty of food for Christmas. Time passed by, but the toys didn't sell quickly that he had expected. Ole thought, perhaps the company needed a good name.

Ole : What should it be ? It has to be a short word. I want to convert play **in well**.

In Danish, play in well is called leg godt.

Ole : What should it be? If only I could get a short of sigh, LEGO.

As you can see Ole himself ended it up finding a very suitable name, but what he didn't know was in Latin the word lego means I put together. The name lego was well received and the company slowly started to move forward.

Son : We've made three thousand of crand this year. And we receive more than usual.

Ole : Did you say 3000 of crand? The you need to see what I've been looking at.

Eventhough Garfred wasn't countable spending money in miling machine, we sould see it was useful and the quality of the toys improved.

Ole : Could you finish the last pads and get ready for shapping?

Son : I will, Dad,dad. I see the lot of money for the company today

Ole : Really? How?

Son : I figure out to save money in the locker, slay duck twice instead of there times.

Ole : You what?

Unfortunetaly, Garpred idea, didn't go over well with Ole. Ole made Garfred unpack the ducks himself, given the last layer of lacker and bring the back to the train station, Ole believe in high quality and not cheating his customers. When garfred retutned, Ole explained that wassn't the way to create good brand, this little lesson opened Garfred eyes to the fack every detail maters and only the best is good enough. In the late 1930 logo was making a propit, even when the secord world war broke out they tired to make the best out of the difficult time , it seem nothing could go wrong. But the stormy high in 1942 charged their luck.

Ole : There's a fire, the workshop is on fire.

But when the fireman arrived they were unable to save the workshop it burned to ground, and the drains and models were distroy. Ole was begin to loose hope, all he worked for was gone and he almost lost his company, but being responsible to this children and workers inspired him to rebuild lego. A new factory was constructed soon the production of wooden toys started again. The little company find it way back to the market, grantually, the Lego factory began to runs smoothy and Oley started looking for a new chalanges. One day he went to copenhagen. Look out a new machine that just arrived in Denmark. It was plastic molleng machin and Ole was very excited about it.

Ole : Sould we buy it? It sure a good bargin and it gives us a lot of oportunity.

Son : Well, it does sound interesting but it's a lot of money.

Ole : I take that's a yes.

When the plastic molling machine finally arroved, Ole started making a little plastic teddy and rabels?, but he still had the plastic bricks that he had received the fare? There was

something about them he could not stop thinking about, and even though he knew he could see the potential in them, Ole decided to redesign and put them into production. But he was. Lego first launched the great distraction: the plastic toys began to succeed, unfortunately the sale was dropping during the summer and the company had too many toys in stock.

Son : This can't be fixed, of course our product can be sold the whole year not only for Christmas.

Garfred he would go out and sell the toys himself, Garfred brought his wife either as company and more support.

Wife : If you can get cash them, mm... we need butter and eggs.

Well, it wasn't that bad, Garfred was successful in his trip around the country which helped Lego to get out of its financial crisis. He reached home just in time for Ole's Birthday party. Ole turned 40 and the whole family was gathered to celebrate with him.

Ole : Well, I guess it was a long trip around the country.

Man : Hey, I got an idea. Listen, listen, what about the picture with the three generations.

Every one thought it was a good idea, and were placed on a sofa with all presents and flowers surrounded on the business trip to England. Garfred met the big head of the big shop in the way home, they discussed the toy industry, and the conversation would be very important to the future of Lego.

Man : Damn, this industry, I just think that toys are not good now a days.

Godtfred : What do you mean? I think they were working very well.

Man : Oh, the work fine. Sure, but there was not system anything.

Godtfred: System? System? Hmmm there isn't any system.

Ole : What's the world are you doing, Garfred?

Godtfred: There isn't any system, the toys need an idea and system built around it. I want to put a system in the play. Children only had been offered ready made solution, they need something different that was strengthen their imagination and creativity.

Ole : So, you try to put Lego into system? Interesting

That same year, Lego started the first Lego system of play children could now build houses from the Lego bricks, the town plan gave play realistic town series and with this the children learn about the traffic safety. My sister and I could play with the new system Lego for hours. Some people said we're the luckiest children in the world because we grew up in the toy factory. It was a huge breakthrough and Garfred tried selling it outside Denmark, the system of play was so popular that they managed to sell it to many countries.

Boy : Look, what I've just build?

Godtfred: That's really nice, Carl

Even though Lego was only building houses, there were still a lot of opportunities but there was just one problem.

Boy : I can't leave it up, it keeps falling apart

That made Godtfred wonder, he wanted to find the way to make the Lego stick together, but that was easier said than done, Godtfred noticed that Lego got a better clasp power with the tubes inside. Now it was not longer just brick but whole construction system with in list possibilities. This was a groundbreaking for Lego product with the child's imagination, Lego could be everything in the world over and over again the imagination is the limit.

Boy : Look dad, now I can build everything.

Unfortunately, Ole never got to see how successful the little brick actually became. Godtfred was left on a zone and he had through another fire on Lego that destroyed the most of the wood production. Just like his father, Godtfred knew that he had to try the best in any situation and never give up. Godtfred took the hard time with his head high. As the sale grew, the company also got bigger. He had to think ahead and he decided not to resume the production of wooden toys and to only focus on Lego system. He turned out to be a great decision. Many new models were built and Lego got stronger in the toy industry.

Man : Sir, which one of this do you think is the best?

Godtfred : Hmm... Ah that one.

Even though got busy on Lego, Godtfred still had a bigger plan. Now, he wanted to build an airport, so it would be easier to sell the toys to the whole world. Like father, like son. It didn't take long to put his idea in action. Only 3 years later, Billund airport was opened. Then, many guests and business connections who visited the company always wanted to see the modeling department. Gradually it got so crowded that was hard for the employees to keep up their work.

Godtfred : I think that we better wait a while

Godtfred could see there something could be done, he needed a bigger place to display the Lego models.

Man : Aaa.. I dont wanna interupt, so I'll just put this package of a new lego train on the table.

Godtfred : Just put it there. Train?

The idea grew quickly from an exhibition room to a museum park.

Godtfred : And then, we can have a tower so you could look over the whole park from above, the whole town, it would be land made of lego, lego land!

Man : Well, it looks interesting but how many visitor are you actually counting on?

Godtfred : Well, I guest ... Mmm.. 200.000, 300.000

Man : Three hundred thousand?

Even know it sounded like a lot, my dad was actually pretty far of the mark. There was 600.000 guests at the very first year, my family and I were there to greet the guests. We kept up this tradition every since.

Now, you know how it all began, lego wouldn't be what it is today if hadnt been from my grandfather, since quality and searched for perfection. My father formly believe in this possibility of the lego system. I seek to take the lego idea even further. Encouraging children to explore, experience, and express their own world, a world without limit. We are still convince that only the best is good enough, because children deserve the best.
